Key Word Index

Absorption line parameters 95
Adalab interface 73
Analysis of variance 69
Apple microcomputer 73
Atmospheric optics 13
Atomic emission 51
Atomic emission spectroscopy 91
Autocalibrations 51

Baseline correction 73

Chemical environment vector 119
Chemical shift 153
Chemical state identification 153
Cluster analysis 119
Computer-aided imaging 91
Computer control 101
Computer-controlled statistics 69
Computer interface 23
Computerized spectroscopic techniques 171
Computerized spectroscopy 113
Conversion from diode number to wavelength 29

Data acquisition 51
Database 95
Data processing 153
Data reduction 63
Diagnosis system 147
Diode array spectrometer(s) 23, 29
Diode-array spectrophotometer 69

Fourier transform 63
Fourier transform infrared spectrometry 35

Gas spectra 13
Gateways 79
Graphics workstations 79

Hierarchical categorization 87

IBM PC 101
ICP 51
Inductively coupled plasma 91
Inelastic electron tunnelling spectroscopy 179
Infrared 171
Infrared microscopy 35
Instrumentation 91
Integration 73
Integration time 69

LAN 79
Linear programming 113
Line intensity calculations 13

Magnetic resonance imaging 1
Management systems 95
Mass Spectrometry 147
Maximum Entropy Method (MEM) 165
Microcomputer 41
Microcomputer interface 51
Microcomputers 63
Microwave-induced plasma 91
Molecular structure analysis 185
Molecular symmetry 13

Network architecture 79
NMR 165
2D-NMR 1, 185
^{2}H NMR 147
NMR Spectrometer 101

Noise reduction 165
Noise suppression 141
Nuclear magnetic resonance 87

Origin recognition 147

Pattern recognition 185
Peak listing 73
Precision 69
Pulsed lasers 41

Raman spectrometer 73
Resolution enhancement 165

Self-deconvolution 165
Smoothing 73
Software 23
Spatial profiles 91
Spectral subtraction 73
Spectra resolution 113
Spectrometry 51
Stable isotope ratios 147
Structure elucidation 133
Superminicomputers 79

Transient averaging 41
Two-dimensional profiling 35

Urinary calculi 171
UV-VIS Spectrophotometry 69

Valence band form 153
Virtual memory 1

XPS data acquisition/processing system 107
XPS spectra analysis 107
X-ray photoelectron spectrometer 107
X-ray spectroscopy 153

Volume Contents

NUMBER 1 JANUARY–MARCH 1986

NMR2: A Powerful Software System for Processing Multi-dimensional NMR Data: *G. C. Levy, F. Delaglio, A. Macur and J. Begemann* 1

Software for the Calculation of Line Parameters for Simple Molecules: *O. K. Voitsekhovskaya, Yu. S. Makushkin, O. N. Sulakshina, N. N. Trifonova and V. N. Cherepanov* 13

A Microcomputer–controlled Diode Array Detector Data Acquisition Unit: *M. Diem and H. Ludl* . 23

A Simple Algorithm to Convert Diode Array Spectral Data to Linear Wavelength or Wave Number Scales: *M. Diem, F. Adar and R. Grayzel* 29

A Computer–controlled FT-IR Sample Stage for Two-dimensional Infrared Profiling: *R. L. White* . 35

High-speed Transient Averaging System: *J. R. Gilchrist, A. Hallam, R. E. Imhof and D. J. S. Birch* . 41

Announcement 49

NUMBER 2 APRIL–JUNE 1986

A Data System for Atomic Emission Spectrometry: *J. V. Auping and R. Megargle* 51

A Unix Operating System Based Computer Workstation for Spectroscopic Data Manipulation: *P. W. Yang, D. J. Moffatt and H. H. Mantsch* 63

On the Precision of a Diode-array Spectrophotometer: *J. W. Hovanec, R. P. Seiders and J. R. Ward* 69

Interfacing a Cary 81 Raman Spectrometer to an Apple Microcomputer: *J. Eric D. Davies* 73

LABnet-3: a Chemical Laboratory Computer Network: G. C. Levy 79

Computer Program for Predicting the Number of ^{13}C NMR Signals Based on Chemical Structure: *K. Funatsu, H. Katsumi and Shin-ichi Sasaki* 87

A Computerized Tool for Studying Two-dimensional Images of Spectroscopic Sources: *B. R. Hites, J. W. Olesik, A. F. Parisi and G. M. Hieftje* 91

NUMBER 3 JULY–SEPTEMBER 1986

Formulation of Databases for Vibration – Rotation Line Parameters: *O. K. Voitsekhovskaya, Y. S. Makushkin, A. V. Rozina and N. E. Yakovlev* 95

Computer Control of the Homogeneity of the Magnetic Field of an NMR Spectrometer. Part I: Hardware: *J. M. Bernassau, D. Mourault, B. Soulas, D. Renard, J. Desert and M. Abgdalhou* . . 101

Interfacing an LHS10 Photoelectron Spectrometer to a Microcomputer: Data Acquisition and Analysis: *E. Desimoni and C. Malitesta* 107

Resolution of Spectral Curves Using a Linear Programming Technique: *F. Ghetti and P. Gualtieri* . 113

Quantitative Examination of the Relationship between ^{1}H- and ^{13}C-NMR Chemical Shifts Applied to Structure Elucidation Processes: *K. Funatsu, C. A. Del Carpio and Shin-ichi Sasaki* 119

Computer-assisted Structure Elucidation Based on the Interdependent Analysis of ^{1}H- and ^{13}C-NMR Spectra: *K. Funatsu, C. A. Del Carpio and Shin-ichi Sasaki* 133

NUMBER 4 OCTOBER–DECEMBER 1986

An Efficient Method for Eliminating Noise in Two-dimensional Nuclear Magnetic Resonance Spectra: *Z. Zolnai, S. Macura and J. L. Markley* 141

ISOLOG: a Diagnosis System for Origin Recognition of Natural Products through Isotope Analysis: *G. G. Martin, F. J. C. Pelissolo and G. J. Martin* 147

Application of Mathematical Processing to X-ray Valence Band Spectra for the Identification of Organic Compounds of Sulphur and Phosphorus: *B. A. Treiger, L. N. Mazalov, G. N. Dolenko and T. I. Guzhavina* 153

Parameterization of Maximum Entropy Calculations for NMR Spectroscopy: *A. R. Mazzeo and G. C. Levy* 165

Computerized Infrared Analysis of Renal Stone Calculi: *S. H. Kandil, T. A. Abou El Azm, A. M. Gad and M. M. Abdou* 171

Smoothing of Inelastic Electron Tunnelling Spectra in the Fourier Domain: *M. Kiviharju and H. Ratinen* 179

Automatic Molecular Structure Analysis by Computer Manipulation of Two-dimensional Nuclear Magnetic Resonance Spectra: *T. Matsuura, H. Suzuki, A. Abe and F. Inagaki* 185
